Creating a Hyperlink to a Tegrity Class Recording

To Create a Hyperlink to a Tegrity recording begin by logging into Tegrity via an eCampus course, or login directly to eClips by going to http://eclips.blinn.edu.

1. Login to eCampus and go to the course containing the Tegrity recordings.
2. Select the Tegrity component on the course page to display the recordings for the class.
3. If you login via http://eclips.blinn.edu the course list displays. Select the course title of the course that contains the recording(s) you wish link to.
4. On the Course Recordings page locate the recording you wish to link to.
5. Check the checkbox displaying to the right of the recording’s date field.
6. Click on the Recording Tasks button to display the drop down list.
7. Select ‘Share Recording from the drop down list.
8. The Share Recording dialog box opens.
9. Uncheck the ‘Do not allow anonymous users to view the recording check box’. Why? If this box remains ‘checked’ students are prompted to login again. This second login can result in access problems. The best practice is to leave this unchecked to allow easy access. If you desire reports that detail the names of viewers you must leave this box checked and be ready to resolve login problems.
10. Use your mouse to select the link address in the ‘URL’ text box.
11. After clicking on the link address to select it, press the Control + C button, or right-click and select copy, to copy the link to your computer’s clipboard.
12. Use this copied link to create your hyperlink in eCampus.
13. To create a link to the Tegrity video in eCampus (D2L) login to eCampus and go to the course you wish to place the link in.
14. Go to the Course Content page.
15. Select the New button.
16. Select Create a Link option.
17. The New Link editor window opens.

18. Enter a Title for the link. The Title displays as the link in the content module.
19. Paste the URL you copied from Tegrity (in steps 8-12 above). If you do not have the link return to step 8 to repeat the link copy steps.
21. Important! You must check the Open as an Eternal Resource checkbox.
22. Click the Create button.

23. An External Link content item displays in the eCampus module. Click on it to test it.
