Blinn Student WPA2 SSID for Windows 8

NOTE - Setting up your own Wireless access points at Blinn College is against Blinn Colleges Fair Use Policy -

https://www.blinn.edu/acadtech/resnet/AcceptableUsePolicyFINAL.htm

NOTE – Before attempting to setup your wireless device connection on BlinnStudentWPA2 first go to password.blinn.edu (from a campus or your home PC) – Logon and answer the two challenge questions to complete your password account setup and change your Blinn password if you haven’t already done so – DO NOT SKIP THIS STEP!

Reboot the computer and logon

Click on the Desktop tile

Mouse over to the lower-right corner or the screen, and from the popup window click on the Settings icon (Gear)

Open the Control Panel applet, and then under Network and Internet click on View network status and tasks

Click on Setup a new connection or network

Click on Manually connect to a wireless network, and then click on Next

In the Network Name box type in BlinnStudentWPA2

In the Security Type box select WPA2-Enterprise

In the Encryption Type box accept the default AES setting, and then click on Next

Click on Change connection settings and select the Security tab

Click on the Settings button, and then uncheck Verify the server’s identity by validating the certificate

Click on the Configure… button, and then uncheck Automatically use my Windows logon name and password

Click on OK (2 times)

Click on the Advanced Settings button, check the Specify Authentication Mode box, and then select User Authentication from the pull down menu

Click on the Save Credentials button, and type in your Student Email ID (Example: first.last12@buc.blinn.edu), and your Blinn Password
Click on OK (3 times), click on Close, and then close the Network and Sharing Center applet

Verify network connectivity
